ABOUT

Gameplay Programmer specializing in gameplay systems, architecture design, and development tools. Experienced in building scalable systems, optimizing performance, and quickly adapting to existing projects. Passionate about turning ideas into engaging gameplay while balancing maintainability, performance, and player experience.

SKILLS & SOFTWARE PROFICIENCY

Programming Language

C#, C++, Python, JavaScript, HTML, CSS

Software & Tools

- Unity3D, OpenGL

Language

Chinese (Native), Japanese (Fluent, JLPT N3), English (Fluent, TOEIC 805)

EXPERIENCE

Junior Game Engineer - 株式会社 Skeleton Crew Studio, Kyoto

October 2024 - Current

- [Unity, C#] Twin Soul - Side-Scrolling rhythm action game
 - Extended an FSM-based enemy AI framework with specialized behaviors and seamless state transitions.
 - Optimized environmental rendering performance through GPU Instancing techniques.
 - Developed custom editor tools that streamlined content creation and localization workflows.
 - Built a customizable input system with key rebinding and save support.
 - Developed reusable gameplay mechanics including destructible and interactive environmental objects.
 - Steam Page: https://store.steampowered.com/app/3844290/Twin_Soul/
- [Unity, C#] Pin Invasion - A roguelike pinball game
 - Designed and implemented the core game architecture, establishing system structure and game flow.
 - Designed a component-driven enemy framework that simplified enemy creation and maintenance.
 - Implemented asynchronous enemy wave orchestration using UniTask.
 - Built a data-driven progression and level-up system supporting randomized upgrade selection.
 - Built custom ball physics on top of Unity's physics system to support gameplay-specific mechanics.
 - Promoted scalability and maintainability through modular architecture and event-driven system design.

Intern - 株式会社 Skeleton Crew Studio, Kyoto

February 2023 - July 2023

- [Unity, C#] Project Space - Local multiplayer cooperative game
 - Co-designed and developed a local multiplayer cooperative game prototype within a two-person team.
 - Implemented local multiplayer systems using Unity Input System, including player joining, automatic device pairing, and reconnection handling.
 - Gameplay Demo: <https://youtu.be/4CMfkhOZMS4>
- [Unity, C#] Death Game Hotel - VR multiplayer card game
 - Implemented RPC-based synchronization for interactive objects within an existing Photon Fusion networking architecture.
 - Refactored the VR UI architecture with reusable components and editor tools, improving maintainability and development efficiency.
 - Researched and integrated TextMeshPro Dynamic Fonts to improve font asset management and reduce memory usage.
 - Official Trailer: <https://youtu.be/RViOf6ZA8n8>
